17-717-232

Date: 28.04.2022

Name: Michael Blum

Keywords: Demo, Docker, Performance testing

Overall Progress: 4

Activities completed:

- US11: The implementation of a visually appealing demo that showcases the capabilities of our service was my main task this sprint. Work included:
    - Fetching of repository file paths via Github API
    - Fetching of file contents via cdn
    - File Detail view with ability of editing and language changing
    - Improve interface design
    - Refactoring of code (usage of pinia storage, restructuring)

Current activities:

- Documentation

Goals or Activities for next deliverable:

- Performance testing: We need to identify potential bottlenecks in our performance as early as possible. Right now we do have too little information about our service speed.

Immediate attention: -

General remark: We are good on track but have to keep in mind that we need to ensure our performance goals, which has the potential to cause a lot of additional work.
